Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/857,182	Applicant(s) ANTON ET AL.	
	Examiner Patricia L. Nordmeyer	Art Unit 1772	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 08 May 2003.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 18-28 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 18-28 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

DETAILED ACTION

Withdrawn Rejections

1. The 35 U.S.C. 103 rejections of claims 8 – 18 of record in Paper #13, Pages 3 – 7, Paragraphs #4 – 9 have been withdrawn due to Applicant's amendment in Paper #15.

Repeated Rejections

2. The double patenting rejection is repeated for the reasons previously of record in Paper #7, Page 2, Paragraph 2.

Claims 1 – 7 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 - 4 of copending Application No. 09/857,181. Although the conflicting claims are not identical, they are not patentably distinct from each other because both applications disclose the same invention in the claims the difference being that one of the applications goes into greater detail in the claims concerning the claimed invention.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

New Rejections

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 18 – 21, 24 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kratel et al. in view of Sklarski et al.

Kratel et al. discloses a microporous heat insulating board with a thickness between 10 to 15 mm (Column 3, lines 14 – 16) that contains 30 to 100% by weight of finely divided metal oxide, 0 to 50% by weight of an opacifier, 0 to 15% of an organic binder and 0 to 50% by weight of a fibrous material (Column 4, claim 1). However, Kratel et al. fails to disclose at least one or both sides of the core having a cover of a heat-resistant material, characterized in that the cover are the same or different and at least one side consists of prefabricated mica sheets, the cover consists of a prefabricated mica sheet on both sides, the cover is adhered to the core and the cover and the core are heat sealed within a sheet.

Sklarski et al. teaches binder being impregnated in a mica paper or papers (Column 1, lines 47 – 52) before placed under heat and pressure (Column 6, lines 33 – 35) in a laminate for the purpose of forming a insulating structure with excellent flexibility, higher moisture resistance

Art Unit: 1772

and more strength that can be used as supporting insulation for high temperature thermostats, control devices, strip heaters and baseboard heaters.

It would have been obvious to one of ordinary skill in the art at the time the applicant's invention was made to have provided a layer of mica sheets as cover sheets in Kratel et al. in order to forming a insulating structure with excellent flexibility, higher moisture resistance and more strength that can be used as supporting insulation for high temperature thermostats, control devices, strip heaters and baseboard heaters as taught by Sklarski.

Kratel et al. ('689) discloses the claimed invention except for the thickness range of the core. However, Kratel et al. teaches a thickness of 10 to 15 mm, thus it would have been obvious to one having ordinary skill in the art at the time the invention was made to have the change the thickness of the core depending upon the end use of each product, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Boesch and Slaney*, 205 USPQ 215 (CCPA 1980).

5. Claims 22 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kratel et al. in view of Sklarski et al. as applied to claims 18 – 21, 24 and 25 above, and further in view of Takahashi et al.

Kratel et al., as modified with Sklarski et al., discloses the claimed invention above

Art Unit: 1772

except for the heat insulation body being characterized in that it contains from 2 to 45% or 5 to 15% by weight of xonotlite.

Takahashi et al. teaches 2 to 60% (Column 7, lines 30 – 34) of xonotlite (Column 21, lines 59 – 61), 21 to 70% of an inactive substance (Column 5, lines 53 – 55) which includes metal oxides (Column 5, lines 31 – 40) and other additives such as fibers and binders (Column 7, lines 51 – 53) in an insulation board for the purpose of forming a board that is light weight, has excellent insulating properties over a wide range of temperatures and has high fire resistance.

It would have been obvious to one of ordinary skill in the art at the time the applicant's invention was made to have provided the xonotlite as a component in Kratel et al. in order to form a board that is light weight, has excellent insulating properties over a wide range of temperatures and has high fire resistance as taught by Takahashi et al.

6. Claim 26 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kratel et al. in view of Sklarski et al. as applied to claims 18 – 21, 24 and 25 above, and further in view of Briers.

Kratel et al., as modified with Sklarski et al., discloses the claimed invention above except for the cover is adhered to the core.

Art Unit: 1772

Briers teaches a sheet of mica (Figure 3, #21) coated with an adhesive (Column 4, lines 47 – 49) before applying metal foil to the surface and adhering them with the help of pressure (Column 5, lines 1 – 5) in a laminate with an insulating layer for the purpose of resisting delamination of the materials due to moisture and erosion.

It would have been obvious to one of ordinary skill in the art at the time the applicant's invention was made to have provided the mica adhered to the core material of the insulating body in the modified Kratel et al. in order to resist delamination of the materials due to moisture and erosion.

7. Claim 27 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kratel et al. in view of Sklarski et al. as applied to claims 18 – 21, 24 and 25 above, and further in view of Nishimoto.

Kratel et al., as modified with Sklarski et al., discloses the claimed invention above except for core and the cover being heat-sealed within a sheet.

Nishimoto teaches heat-sealing the core material (Column 9, lines 39 – 47) with mica on the outer edge of the core (Figures 1 and 3, #5) in a insulating board (Column 1, line 6) for the purpose of reducing the amount of heat radiation through the insulation with only a thickness of 20mm or less.

It would have been obvious to one of ordinary skill in the art at the time the applicant's invention was made to have provided the heat-sealed core of an insulating board in the modified Kratel et al. in order to reduce the amount of heat radiation through the insulation with only a thickness of 20mm or less.

8. Claim 28 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kratel et al. in view of Sklarski et al. as applied to claims 18 – 21, 24 and 25 above, and further in view of Kojima et al.

Kratel et al., as modified with Sklarski et al., discloses the claimed invention above except for the microporous body being stable at 620 °C.

Kojima et al. teaches heat resistant porous film layers (Column 9, lines 19 – 20) exhibiting resistance to temperatures of at least 600 °C (Column 9, lines 22 – 23) for the purpose of prevention decomposition of the materials when heat is applied to the formed article.

It would have been obvious to one of ordinary skill in the art at the time the applicant's invention was made to have provided the heat resistant material with temperatures of at least 600 °C in the modified Kratel et al. in order to prevent decomposition of the materials when heat is applied to the formed article.

Response to Arguments

9. Applicant's arguments with respect to claims 18 – 28 have been considered but are moot in view of the new ground(s) of rejection. However, since the same prior art is being maintained, the arguments will be responded to below.

In response to Applicant's argument that Sklarski et al. mica covers are unstable as a cover for the heat insulation body due to the organic components, Sklarski's covers are performing an equivalent function to the covers of the invention, i.e. use in insulation. The fact that the covers contain organic components does not prohibit use as insulation.

No mention of the absence of organic materials is made in the second independent claim, and thereby the previous rejection is being maintained due to use of the insulation in a high temperature as claimed.

10. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., high temperatures occurring during heating) are not recited in the rejected independent claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

Conclusion

11. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patricia L. Nordmeyer whose telephone number is (703) 306-5480. The examiner can normally be reached on Mon.-Thurs. from 7:00-4:30 & alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Harold Y. Pyon can be reached on (703) 308-4251. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Art Unit: 1772

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0661.
